

Grains

Selecting oak for its grain structure rather than organoleptic potential is traditional in French barrel-making. The method relies on the density of the oak staves used to produce an effective bioreactor. These products use this method. The wood has been specifically selected for the quality of its grain.

Available Grains

	Extra tight grain	Tight grain	Mid tight grain
Origins	France, principally Central and Eastern France		
Approx. diameter	-1 mm	1 to 2.5 mm	2.5 to 4 mm
Enological applications	Exceptional wines	Conventional barrel-ageing	Non-conventional barrel-ageing

CADUS

Specifications

- Longstanding partnerships with selected stave-makers
- Systematic and complete sorting of all staves upon reception
- Static, natural drying process for 30 months
- Traceability: origin and date placed at drying site
- Identifying and separating grain quality into 3 families
- Our assemblage casks are certified made from 100% French oak

Toasting

- Slow and deep oak extraction: type M
- Slow and deep oak extraction: type M+
- Slow and deep oak extraction: type M++

Availabilities

Volume (litre)	114	225	228	265	300	400	500
